

2nd Chinese-Austrian Workshop on Environmental Odour

Odour Emission - Dispersion - Impact Assessment – Abatement

Tongji University

Shanghai, China

20th & 21st September 2016

Sponsored by the Eurasia-Pacific Uninet

Topic

Environmental odour is a major concern of residents in the vicinity of odour sources. This workshop will treat the entire chain from the odour source, the dilution in the atmosphere up to the perception of odour by the nose of residents.

The workshop will include the characterization of the odour source by emission factors and emission models, the use of dispersion models to describe the transport and dilution in the atmosphere, the assessment of the relevant stimuli concentration and the odour impact criteria. The scope of the workshop is to include all types of odours related to industry (e.g. rendering plants, refineries), municipal plants (e.g. waste water treatment plants, solid waste landfills), and animal husbandry.

The meeting will offer the possibility for the participants to exchange views and to achieve a better understanding of the specific aspects relevant to odour problems.

Registration

The registration form will be available in February 2016.

The proceedings will be published as open access extended abstracts in the Journal *Austrian Contributions to Veterinary Epidemiology* (acve.vu-wien.ac.at).
